

## 2017 ZJUBTV Internal Course Week3

Learning Resource:

- 1、[http://www.w3school.com.cn/html/html\\_forms.asp](http://www.w3school.com.cn/html/html_forms.asp)
- 2、The PPT and WORD last week

If you forget how to finish the work, you can review with the source. And ask us in the Wechat Group or QQ group when something can not be solved.

### **Week 3 Assignment about Interaction between Front-end and Back-end (Due: 5:00 pm October 22,2017)**

#### **Assignment 1:**

You are required to draw a form at a webpage (named with 'register.html'). This form is used for register, which means that in this form you can input the user account and the password.

After you input the user name and password and click the "submit" button, this system would do the two following task:

1. Jump to a new webpage (named with 'result.php'), on which your username and password is demonstrated on it.
2. Transfer the data to the server side(back-end) and store the username and password into the database designed by yourself

Requirement & Hint:

1. You should hand in your code packed in a folder.
2. You should also submit the screenshot of the result on 'result.php' and data storage about the username and password of your related database in phpMyadmin.

#### **Assignment 2:**

Create a repository named with 'Internship\_Demonstration' on Gitlab

([https://git.zjutv.com/users/sign\\_in](https://git.zjutv.com/users/sign_in)) (Not Github!!)

(Only accomplished by one of you, and the creators invite others to join this project)

Start to prepare for your internship homework (实习期大作业)
